Zignago Vetro joins the Intermonte Valore Italia Index

Fossalta di Portogruaro, July 2, 2026. Zignago Vetro is pleased to announce its inclusion in the **Intermonte Valore Italia Index**. The index consists of the top 100 small and medium-sized enterprises listed on Borsa Italiana with a market capitalisation of less than one billion Euro and not included in the FTSE MIB.

The index was created to highlight the excellence of Italy's manufacturing sector, establishing a direct link between entrepreneurship, the capital markets and the national economy. For domestic and international investors, it provides a key option for diversification compared to traditional stock market indices, highlighting the quality and expertise which is a feature of Italy's real economy.

The selection is based on rigorous technical and financial criteria used by the sponsors to ensure adequate levels of liquidity, transparency and investability. In fact, key factors such as the minimum free float, the strength of corporate governance, debt sustainability and consistent coverage by financial analysts were analysed.

The launch of the index marks a decisive step in Banca Generali's innovative strategic project, which was unveiled on July 1, 2026 at the "Palazzo Mezzanotte", the headquarters of Borsa Italiana. The initiative was launched specifically to address the long-standing lack of liquidity that often hinders publicly traded SME's, supporting them on their growth path and making them more visible and attractive to large investors. The project combines the strength of Banca Generali with the specialised expertise of Intermonte, an integral part of the Group since 2025, which has long been a leading authority in financial research and investment banking for SME's.

Based on this index, Banca Generali, in collaboration with Investlinx and Intermonte, has launched a new actively managed, PIR-compliant ETF. The fund will invest directly in the companies included in the index, including Zignago Vetro. Banca Generali will support the fund with an initial investment of 100 million Euro, with the aim of gradually increasing its exposure to 500 million over the medium term. According to estimates, this operation will generate steady market flows of approximately 1–2 million Euro per day, a capital infusion equivalent to more than 5% of the index's total free float.
